

EBU welcomes the Vereniging van Waterbouwers as new member

The Vereniging van Waterbouwers (VvW) is pleased to join as a member at EBU. We kindly introduce ourselves.

The VvW is the Dutch Association of Dredgers and Hydraulic Engineers. Our 91 members engage themselves with all aspects of hydraulic engineering e.g. the construction & maintenance of waterways and ports, bank protection works, coastal defences, land reclamation and dredging. With the execution of these activities sustainability and safety are highly valued. The hydraulic engineering projects are carried out by a large and diverse inland fleet of (work)vessels, crafts and floating equipment.

The VvW is proud to promote and look after the interests of this industry that has been globally renowned for its expertise for centuries. An international sector with a rich history and an valuable future for society. Hydraulic engineers act at the spectrum of both contracting and shipping. This makes the sector unique with a proactive mentality and a passion for expertise and also with big social awareness for water safety, water management and maritime infrastructure. Therefore, our slogan is “Geen Land zonder Waterbouwers” (Without dredgers and hydraulic engineers, there would be no land).

The VvW is looking forward to a constructive cooperation with EBU and will put effort into a positive and constructive contribution to the diversity of inland shipping.
